How to Become a Millionaire in US Healthcare

Authored by:

Brian L. Weaver II, CEO
Health and Wealth Warrior, Inc.

As you may suspect, the US Healthcare industry is booming like never before with no signs of slowing down and lots of opportunities.

And the medical billing outsourcing market is growing faster than previously speculated. The U.S. medical billing outsourcing market was valued at 4.3 billion USD in 2020, and is expected to reach a value of around 10.0 billion by 2028 at a CAGR of 11.3% from 2021 to 2028 based on a 2021 report by Grand View Research, Inc. Meaning a billion dollars a year at a minimum will flow into the piggy-banks of medical billing outsourcing companies'.

With the help of the right licensing, training and support company and your diligent effort, a nice portion of this money could flow directly into your bank account in the coming months.

Medical billing companies are all about timely and accurate claims submission to decrease turnaround time of paid claims and improve cash-flow. Healthcare leaders report that 42% of prior authorization is the top reason for denials in their organization, according to a recent MGMA research study. The fix for continued revenue loss in a practice is to outsource their medical billing and additional tasks that professional companies pay more attention managing.

Most Healthcare Providers Don't Get Paid What They are Owed by Insurers.

Why is it then, that so many healthcare providers lose so much money year after year with no consistently changing rules and regulations of federal, state, and insurance companies. This is truly needed today, or the revenue loss on such a massive scale will continue to hinder private practice providers growth and practice financial success based on industry trends.

The US Health Care System Needs RCM Entrepreneurs Who Can Help Providers Prosper and Grow Their Practices.

ClaimTek business owners or (Licensees) can help doctors and dentists to do so much more than claims processing and collections. ClaimTek Licensees can also help to integrate software technology using ClaimTek AI, artificial intelligence to connect to any software system on the market for easy implementation and data collection to streamline claims processing.

We can also help to reduce costs for providers in more than a dozen ways through personalized services to help providers grow their business. Such services as Physician Credentialing, Medical Coding, Medicare Audits, Transcriptions, EFT for electronic payments & patient payment plans, reduced credit card processing rates and much more.

Healthcare providers need reliable practice partners who have a vested interest in their success. Specific people they can rely on to make sure they get paid and are protected consistently through good times and bad.

Did you know that 73% of medical practices rank staffing as their biggest pandemic challenge heading into 2022 according to a recent study by the MGMA? So how can YOU help solve this problem?

Start your own Medical & Dental Billing Business with ClaimTek Systems and help to improve healthcare in your community and across the nation! ClaimTek has been the leader in healthcare billing entrepreneurship in the US for 30 years. [continued.....](#)
